

NHGRI's Technology Transfer Office always keeps the institute's best interests in mind

ERIC GREEN, M.D., PH.D. | JULY 07, 2022

I would like to bring to your attention a wonderful example of scientific influencers making their way into pop culture. Recently, four NHGRI-funded genomic scientists were **named** among the 100 most influential people of 2022 by Time magazine. **Adam Phillippy, Ph.D., Karen Miga, Ph.D., Evan Eichler, Ph.D.,** and **Michael Schatz, Ph.D.** were honored for their roles in leading the **Telomere-to-Telomere (T2T) Consortium** to produce the first truly complete sequence of a human genome. Congratulations to these four and the entire T2T Consortium for this truly amazing scientific accomplishment and well-deserved recognition.

All the best,
